

Quiz Answer Key

Building Modern Web Applications with AI

Institution: Sona College
Quiz: Day 1 Quiz
Day: 1

Student: Shameela P
Roll Number: 2503617862222078
Score: 10 / 10

1. What is the main purpose of a frontend in a web application?

- A To store user data permanently
- B To display the user interface and handle user interactions**
- C To manage server security only
- D To directly control the database

2. Which of the following best describes a web application?

- A A page that only displays fixed information
- B A server without a user interface
- C A database management tool only
- D Software that runs in the browser and allows users to perform actions**

3. In a full-stack application, what does the backend mainly handle?

- A Business logic, APIs, authentication, and database communication**
- B Button colors and page layout
- C Browser animations only
- D Image design only

4. What is JSON commonly used for?

- A Designing logos

B Styling web pages

C Sending data between frontend and backend

D Hosting websites

5. Which HTTP method is commonly used to get/read data from a server?

A PATCH

B POST

C DELETE

D GET

6. Which of the following is a database?

A MongoDB

B Tailwind CSS

C Svelte

D Express.js

7. Why should the frontend usually not call an AI API directly?

A Because frontend cannot display AI responses

B Because AI APIs only work with HTML

C Because API keys can be exposed and misused from the frontend

D Because databases cannot store AI responses

8. In the architecture User - Frontend - Backend - Database, what is the role of the backend?

A To replace the database

B To act as a bridge between frontend and database while applying logic and security

C To only show buttons and forms

D To directly control the user's browser history

9. Which route is most appropriate for creating a new note in a REST API?

A GET /api/notes

B POST /api/notes

C DELETE /api/notes

D GET /api/notes/:id

10. In an AI Notes Summarizer app, which flow is the most appropriate?

A Frontend - Database - AI API - User

B User - Database - Frontend - AI API

C User - Frontend - Backend - AI API - Backend - Frontend

D AI API - Database - User - Backend
